Innovating in Education

Inspire and be INSPIRED!
The AMEE Conference provides an opportunity for all with an interest in medical and health professions education to meet together to hear about what’s new, to share ideas and to network with colleagues from around the world. Over three thousand participants from one hundred countries are expected, bringing with them a rich range of cultural experiences, and making this the largest annual international medical and health professions education conference.

As a teacher or trainer, a dean or a course organiser, an educationalist or researcher, an administrator or a student, you should come to AMEE 2016 to hear about key developments in curriculum planning, approaches to teaching and learning, assessment methods, educational management, and evidence-informed teaching. You also have the opportunity to present your own work to enthusiastic and like-minded colleagues.

Sessions at AMEE conferences cover the continuum of education in medicine and the health professions from undergraduate education, through postgraduate education to continuing professional development.

Conference themes include:
• Responding to challenging circumstances
• Justifying the costs of innovation
• Decision-making in a complex environment

For details of presentation formats please see www.amee.org

Preconference workshops and symposia should be submitted on the form which can be downloaded from the website.

Research papers, PhD Reports, Short communications, Posters, Conference workshops and Fringe abstracts may be submitted online from 1 December.

Preconference programme - Saturday 27 and Sunday 28 August:
• The popular Essential Skills in Medical Education (ESME) courses;
• Full-day and half-day preconference workshops.

Main Conference programme – Sunday 28 to Wednesday 31 August:
• Plenary presentations from internationally renowned speakers;
• Symposia providing the opportunity to debate subjects of topical interest, with short presentations from different perspectives;
• Short communication sessions with themed papers from submitted abstracts;
• Poster presentations with themed posters from submitted abstracts;
• Conference workshops on practical topics, offering maximum interactivity with presenters;
• An exhibition of commercial and academic stands representing the latest developments in education in medicine and the health professions.
